DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to compositions for growing pluripotent cells including a factor(s) capable of inhibiting an activity of BMP-2, a method for growing pluripotent cell lines by culturing cells in the presence of a factor(s) capable of inhibiting an activity of BMP-2, classified in class 435, subclass 405.
- II. Claims 13-23, drawn to a method for growing pluripotent cell lines by culturing cells in the presence of a factor(s) capable of inhibiting an activity of BMP-2, classified in class 435, subclass 7.2.
- III. Claims 24-35, drawn to methods for producing a factor(s) capable of antagonizing an action of BMP-2 on pluripotent, classified in class 435, subclass 4, for example.
- IV. Claims 36-39, drawn to pluripotent cell lines, transgenic embryos, and animals, classified in class 800, subclass 8.

The inventions are distinct, each from the other because of the following reasons:

Invention I, II and III are mutually exclusive and independent. The compositions and methods for growing pluripotent cells of I and II are not required for the implementation of the methods of producing a factor capable of antagonizing an action

of BMP-2 on pluripotent cells of III, and vice versa. Furthermore, each method requires a separate and materially different protocol.

Inventions I, II and III are to distinct products. For example, the cell lines of Invention III can be used to produce proteins in vivo and the transgenic embryos and animals of III can be used to observe gene function, or as models for disease.

Inventions III and IV are mutually exclusive and independent. The method of producing a factor capable of antagonizing an action of BMP-2 on pluripotent cell of III is not required for the implementation of the pluripotent cell lines, transgenic embryos and animals of IV.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Claims 8 and 20 are generic to a plurality of disclosed patentably distinct species comprising factors . If group I or II is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marcia S. Noble whose telephone number is (571) 272-5545. The examiner can normally be reached on M-F 9 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ram Shukla can be reached on (571) 272-0735. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
